

Some Lyx/L^AT_EX Graphs for Game Theory

Benedikt Kolb, benedikt@bkolb.eu

January 27, 2015

This note presents some graphs – best response drawings and extensive-form games – using [Martin Osborne](#)'s sgame and egame packages. They are a random selection from my solutions to problem sets for a course with Fernando Vega-Redondo at EUI. Files can be found on my [homepage](#).

Note that it is advisable to install the `egame` and `sgame` packages by Osborne first. However, I included some of the `.sty` and `.def` files required to compile the documents in the `.zip` file, so you might be able to run the `.tex` and `.lyx` files right away. Enjoy, and feel free to leave comments at benedikt@bkolb.eu.

1 Best Responses

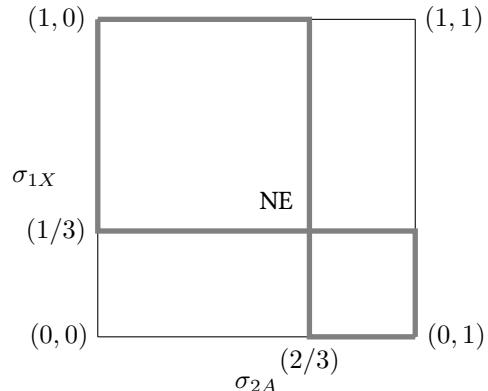

Figure 1: **Best responses I**

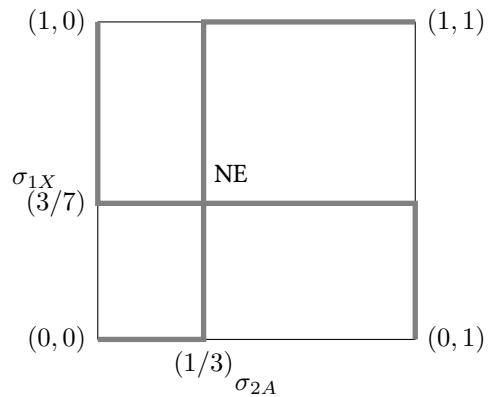

Figure 2: **Best responses II**

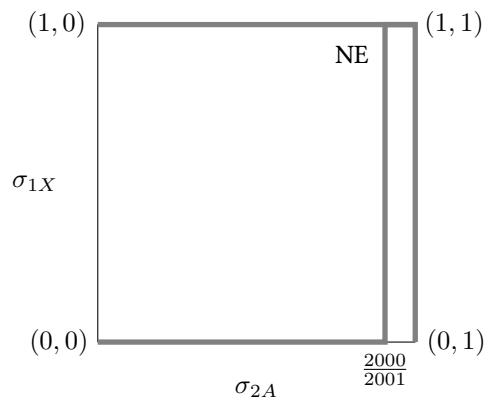

Figure 3: **Best responses III** (Note: not to scale)

2 Extensive Games

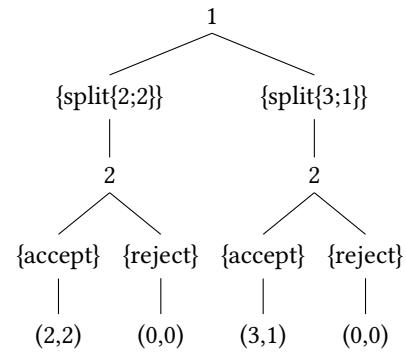

Figure 4: **Extensive-form game I**

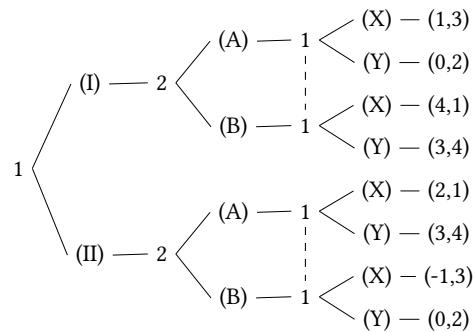

Figure 5: **Extensive-form game II**

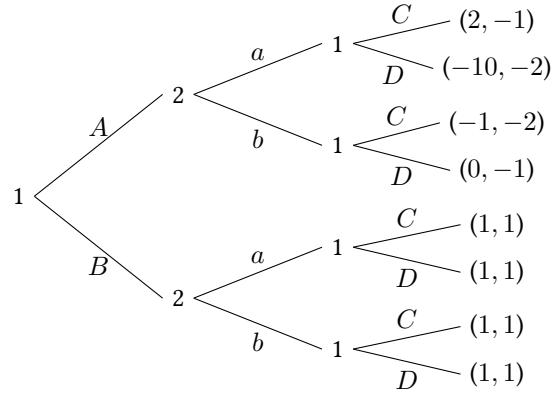

Figure 6: **Extensive-form game III**

2.1 Centipede Game

$t = 1$	$t = 2$	$t = 3$	$t = 4$	$t = 5$	$t = 99$	$t = 100$	$T = 101$
P1 S I (1000, 1000)	P2 S I (0, 3000)	P1 S I (2000, 2000)	P2 S I (1000, 4000)	P1 S I (3000, 3000)	P2 S I (50000, 50000)	P1 S I (49000, 52000)	(51000, 51000)
